Time of the certification system on the development trends (2010-2025) that determine their economic effects were assessed.

DISCUSSION AND RESULTS

Product certification plays an important role in the global economic environment. This process is the quality of the product, and ensure compliance with safety standards, both fellow out of work creates the opportunity to international markets. In the last five years ten (2010-2025) uzbekistan europe, asia and certification systems have evolved significantly in the cis countries. In particular, the international JESUS, IEC, gost and other standards of the integration process is accelerated. Although uzbekistan is developing a certification system among the cis countries, the european union and asian countries when compared with the still low level of digitization. As international experience shows, the environmental certification of export products by 15-20% increase.

Uzbekistan's certification of the system, the gradual modernization and, for electronic certification system, the introduction has been and quality control mechanisms was strengthening. European Union while the products of the environment of clean, energy efficiency and consumers rights protection to directed certification requirements strengthen. Asian countries, especially China and South Korea, innovative technologies on the basis of automated certification system was the development. CIS countries while the gost standards of the international JESUS and IEC system the transition of trends were observed.

State/System	of main certification system	2010-2015	2016-2020	2021-2025	Conclusion and prospects
Uzbekistan	OJESUS, HACCP, EAC	, iso 9001 adaptation begin	“Technical aspect from a regulated material,” the law received was	Electronic certification system developed, EA standards deal near	International certification system into full integration of the process to continue continues
the european Union	CEO, iso 9001, iso 14001, GMP	Environmentally clean products certification of the severity	of online trading products for new standards and the introduction of it has been	AI Io products for certification system developed has	New technologies and environmental standards, attention has increased

Table 1. 2010-2025 years in various states in the product certification system development.

Conclusion:

the results of research the main purpose – product certification international experience of the study, its commercial and industrial development, the effects of determine and work out the optimum certification model is recommended from is.

Uzbekistan, Europe, Asia and CIS countries, product certification system on out and go research that shows, this process each a region of economic, legal and technological development level depends on without occurs. Europe state that Jesus and the CEO as international standards introduction, that is, CIS countries, local regulations and certification systems dominate the will. In Uzbekistan, while in recent years the international standards to fit, which comes certification of the system development, particular attention is paid.

2010–from 2025-years over the certification process in a number of important changes were observed. In particular, international trade requirements to adapt in order to Uzbekistan, quality control improved, the product safety on the legislation has been improved and the electronic certification system for the introduction was. New technologies, in particular, artificial intelligence (AI) and Nesnalar the internet (Io) for special certification system working out I started. This with along, environmental certification requirements increase, international standards, compliance with the issue of critical importance acquires continues.

Analysis that shows, product certification system bettering not only the internal market of safety to ensure, but also the international trade involved the expansion also service makes. For this reason, certification of the system, the full digitization and automation, data base integration and international cooperation expansion in the coming year, the priority tasks of one to remain. Also, small and medium business for certification requirements, simplifying also important priorities of the one is.

In the future, e - commerce and online trading products for new certificate of the system introduction to product safety and quality to ensure the service will. Uzbekistan international market to capacity expansion and advanced technologies certification system applied of this process, the main factors of one to remain.

Uzbekistan for certification in the system of digital technologies, further development should be.

International standards, conformity increase to additional legal and technical reforms required are.
